SUMMARY

Experienced Backend Engineer specializing in Python microservices, distributed systems, and scalable cloud architecture.

SKILLS

Languages: Python, SQL, Go

Frameworks & Libraries: FastAPI, Flask, Redis

Databases & Cloud: PostgreSQL, Docker, AWS, Linux, Git

EXPERIENCE

Senior Software Engineer - CloudScale Systems (2021 - Present)

- Architected high-throughput REST APIs and microservices using Python and FastAPI.
- Designed and optimized relational databases using PostgreSQL, reducing query latency by 35%.
- Containerized microservices using Docker and managed deployments across Linux environments.

Software Developer - DataCore Solutions (2018 - 2021)

- Developed backend data ingestion pipelines and RESTful web services in Python.
- Maintained database integrity with SQL queries and automated schema migrations.
- Utilized Git for version control and collaborated in agile sprint planning.

EDUCATION

B.S. in Computer Science - University of Washington (2014 - 2018)

PROJECTS

Distributed Task Queue

- Built an asynchronous background worker system using Python and Redis for task scheduling.
- Implemented automated health check endpoints and structured logging.

CERTIFICATIONS

AWS Certified Solutions Architect
